

Bind Room - Money Face SKU

Examiner artifacts for insurance/compliance buyers. Not the first literacy doc.

Source: [gate/bind_room.py](#) | Undefined word? Open doc 18 (Layer 0 atoms) and define it before continuing.

WARNING: This is a SKU / ops / examiner pack - not Layer-0 teaching. Regulator words (SERFF, NYDFS, ECDIS, PolicyCenter) are buyer dialect. Own atoms in 18 and mouth literacy in 11 before living here. Price: \$1,750.

Plain opener

Bind Room sells two things examiners actually take: (A) a short officer pack shaped like a filing, and (B) an on-request appendix of halt/verify links per bind event. It is not the production weld. It is evidence and packaging around halt-on-bind.

What you are selling

- A: Officer pack (<=10 pages) - titles on each Section 5 duty
- B: Appendix of verify_url + hop per bind event (not the SERFF body)
- Price / CTA: \$1,750

Plain meaning of the pack

- Who can stop bind when authority is DEAD?
- Can you show a DEAD drill with a stranger-openable verify link?
- Is hop required before the irreversible bind write?
- Timeout = HALT, never silent LIVE
- CHARGE-only resurrect - approve-in-meeting is not enough
- Gate is control plane, not a rating model - carrier duty remains

Refuse

- Do not lead with courtroom evidence cosplay to a CUO
- Do not sell model inventory piles
- Do not put PII on Gate

Retrieval drill

- Is Bind Room a weld? (No.)
- What two artifacts do examiners take?
- Name one plain control the pack must show.
