

Mouth Literacy - No Code Required

Be able to explain the Action OS mouth in plain language. This is founder-deep before you can read every line of Gate.

Source: Derived from gate doctrine (SCIENCE, action_os, science_pri, Prefinality)

One sentence

Nisaba is the Action OS: we sit on permission for irreversible acts. Scarcity is a DENY that holds, with a receipt a stranger can open.

The problem we sit on

Modern systems multiply what they can do - pay out, peg out, bind, agent side effects. Catastrophe and liability often come from completing an irreversible write when may is missing. Can is cheap. May is scarce.

can: The system is able to perform the write (API works, keys exist, agent has a tool).

may: The write is allowed to complete under live authority, policy, and proof.

The four laws (memorize)

1. can != may

Ability is not permission. Diligence asks: where can the irreversible write still complete without may?

2. clearance != execution

Gate can say the act may proceed. Gate does not itself move the money or bind the policy. write_executed stays false on Gate's clearance path. The exclusive edge runs the write after permit.

3. CHARGE-only resurrect

Fuse states include LIVE and DEAD. When DEAD, the write must not complete. Returning to LIVE requires CHARGE - not a dashboard flip, not a polite admin yes.

4. Clear <=> reconstruct

Prefinality: at the effectuation boundary, Clear means the proof can be reconstructed as presented AND LIVE. A GO sticker alone is not enough if it cannot be rebuilt and verified.

Family map (questions)

Erra

Question: Should we act?

Rail: signal - ACT / HOLD

Velaru

Question: Did we commit correctly?

Rail: proof - ALLOW / BLOCK + fuse

Gate

Question: Does the irreversible write complete?

Rail: mouth - /v1/act, CHARGE, weld

Verra

Question: Did both rails clear before bind?

Rail: action session

Mishara

Question: Was a person harmed?

Rail: consumer harm path

Money faces vs the firm

- Diligence (\$2,500 deposit) - paid find of may-gaps on a mouth. Not a weld.
- Bind Room (\$1,750) - examiner pack / stranger-openable halt artifacts. Not a weld.
- Operator / register / weld - fortune lane when a real irreversible path is exclusive.
- Nisaba / Action OS - the company. Prefinality is law inside it, not a sister company.

Honesty bit

their_production: false until a recorded third-party exclusive production weld. Demo hops are museum.

First commercial driver

Withdraw / payout - clear before wire. Prove DENY on one money-leave path before grid or force cosplay.

Retrieval drill (blank page)

- Write the one sentence.
- Define can vs may with one money example.
- Explain why Gate saying yes is not the same as money leaving.
- Explain DEAD and what alone can resurrect.
- Explain Prefinality Clear in one sentence.
- Name Erra, Velaru, Gate questions in order.

What this is not

- Not AI governance slideshows that never sit on the write
- Not claiming production you do not have
- Not needing to code to understand the firm - coding comes next as map-reading
