

Foundations Trunk - For a Civilizational Mouth

Not all of high school. The trunk your Action OS knife rests on. Expand the cone over years.

Source: Study plan companion

Rule

Surgeon depth is a narrow cone on a solid trunk - not encyclopedic recall of every textbook page.

Trunk for Nisaba (priority order)

A. Logic and invariants

- If/then, necessary vs sufficient, contradiction
- Fail-closed as a logical default under uncertainty
- Practice: state Gate laws as iff / else DENY

B. Systems thinking

- Inputs, state, outputs, side effects
- Irreversible vs reversible actions
- Timeouts, retries, and why retries can be dangerous on money leaves

C. Probability and uncertainty (light)

- Confidence vs proof
- Why soft-yes under panic is a failure mode
- Enough to talk risk with operators without faking stats PhD

D. Discrete / computer literacy

- Bits, hashing (fingerprint idea), signatures at concept level
- APIs, auth, receipts
- Code-reading doc 12

E. Physics / nature intuition (layer-1 heart)

- Conservation / limits - you cannot undo some writes cheaply
- Energy, time, irreversibility as real constraints
- Later: deepen EE/systems if you weld into infra/force categories

F. Formal math (slow burn)

- Algebra fluency enough to not freeze
- Linear algebra + probability as you approach Prefinality/recon rigor
- Do not block shipping on finishing a textbook

Weekly rhythm (wage era)

- Daily: 15-20 min retrieval on mouth laws (docs 01-03, 11)

- 2-3x/week: 15 min code-reading (doc 12 + one function)
- 1x/week: one foundations drill from A-E
- Non-negotiable: Friday deploy + outbound until surplus

What not to do

- Do not attempt all of Khan Academy before sending emails
- Do not confuse notebook collecting with trunk
- Do not claim production or clearance-depth you do not have

Success signal

You can teach the mouth to a sharp operator without notes, read Gate well enough to catch honesty bugs, and keep shipping. That is the trunk. The cone narrows into Prefinality, welds, and later clearance rooms.
