TEACHING DOC. Code dump in study-pdfs/reference/. Undefined word? Open doc 18 (Layer 0 atoms) and define it before continuing.

Plain opener

Demo hops are museum until a real third party runs their irreversible write through your exclusive door. their_production is the honesty bit: false means do not talk like you are in production on their path. Dogfood (you welding yourself) can lift readiness - it still does not flip their_production.

Two different welds

dogfood_weld: First-party recorded weld. Helps proof/deploy maturity. Does NOT claim their_production.

production weld (their_production): Third-party exclusive path attested. Requires real confirm + exclusivity. This is the honesty flip.

Readiness vs production

- Proof suite / checklist can say deploy-ready
- Only recorded exclusive third-party weld flips their_production
- Force/battlefield remains category-only until welded

Checklist ideas (plain)

- Closed-world /v1/act door exists
- Public demo hop fails closed with verify link
- CHARGE-only DEAD -> LIVE
- PII rejected on PAS paths
- Register + operator checkout live
- Action OS formula published
- Proof suite passes
- Stranger verify via Velaru

Retrieval drill

- Define their_production without the flag name.
- Why doesn't dogfood count as their_production?
- What stays false until a real exclusive third-party weld?
